## MONTHLY WHOLESALE TRADE: SALES AND INVENTORIES FEBRUARY 2002

Intention to Revise Wholesale Estimates: Monthly wholesale sales, inventories, and inventories/sales ratios will be revised based on the results of the 2000 Annual Trade Survey. Revised unadjusted and corresponding adjusted data are scheduled for release on May 3.

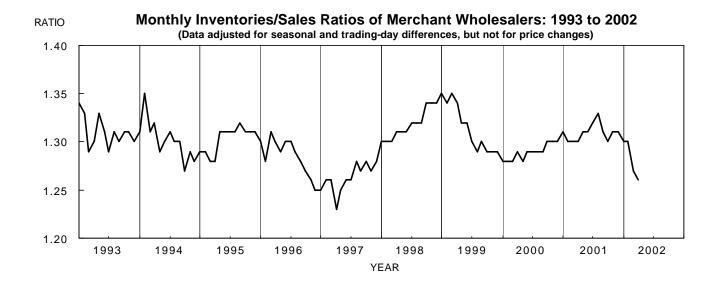

**Sales.** February 2002 sales of merchant wholesalers, after adjustment for seasonal variations and trading-day differences but not for price changes, were \$227.0 billion, up 0.8 percent (+/-0.5%) from the revised January level, but were down 2.3 percent (+/-1.5%) from the February 2001 level. The January preliminary estimate was revised upward \$0.1 billion or 0.1 percent. February sales of durable goods increased 0.8 percent (+/-0.8%) from last month, but were 3.4 percent (+/-2.4%) below a year ago. Compared to last month, sales of lumber and other construction materials were up 4.3 percent and motor vehicle and motor vehicle parts and supplies increased 1.6 percent. February sales of nondurable goods increased 0.8 percent (+/-0.7%) from January, but were down 1.2 percent (+/-1.8%) from last year. Sales of beer, wine, and distilled alcoholic beverages increased 2.8 percent, while petroleum and petroleum products decreased 2.9 percent.

**Inventories.** Total inventories of merchant wholesalers, after adjustment for seasonal variations but not for price changes, were \$285.1 billion at the end of February, down 0.7 percent (+/-0.3%)

from last month, and were down 5.8 percent (+/- 2.4%) from a year ago. The January preliminary estimate was revised downward \$0.7 billion or 0.2 percent. End-of-month inventories of durable goods were down 0.9 percent (+/-0.4%) from January and decreased 10.8 percent (+/-2.2%) from last February. Compared to last month, inventories of machinery, equipment, and supplies fell 1.3 percent, and motor vehicle and motor vehicle parts and supplies decreased 1.2 percent. Among nondurable goods, paper and paper products declined 1.1 percent from last month.

**Inventories/Sales Ratio.** The February inventories/sales ratio for merchant wholesalers, based on seasonally adjusted data, was 1.26. The February 2001 ratio was 1.30.

Data in this report are based on a sample and, therefore, are subject to sampling and nonsampling variability. A discussion of the reliability of the data and general survey methodology appears in BW/00-A Current Business Reports.

Monthly Wholesale Trade for February is scheduled to be released May 7, 2002 at 10:00 a.m.

Address inquiries concerning this report to Service Sector Statistics Division, U.S. Census Bureau, Washington, DC 20233, or call Scott Scheleur, (301) 457-2747 or 457-2764. For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

This report is available on day of issue through the Department of Commerce's online Economic Bulletin Board (202-482-1986). The data are also available on the internet - http://www.census.gov/svsd/www/mwts.html.

## **Reliability of Estimates**

There are two types of errors possible in an estimate based on a sample survey: sampling and nonsampling.

Sampling errors occur because observations are made on a sample, not on the entire population, and different samples could have led to different estimates. Standard errors and coefficients of variation, as calculated for this report, are measures of sampling variation. The margin of sampling error, as used on page 1, gives a range about the estimate which is a 90% confidence interval. If, for example, the trend estimate is up 1.2% and the standard error is 0.9%, then the margin of sampling error is  $\pm 1.65 \times 0.9\%$  or  $\pm 1.5\%$ , and the 90% confidence interval is  $\pm 1.65 \times 0.9\%$  or  $\pm 1.5\%$ , and the 90% confidence interval is  $\pm 1.65 \times 0.9\%$  or  $\pm 1.5\%$ , and the 90% confidence interval is  $\pm 1.65 \times 0.9\%$  or  $\pm 1.5\%$ , and the 90% confidence interval is  $\pm 1.65 \times 0.9\%$  or  $\pm 1.5\%$ , and the 90% confidence interval is  $\pm 1.65 \times 0.9\%$  or  $\pm 1.5\%$ , and the 90% confidence interval is  $\pm 1.65 \times 0.9\%$  or  $\pm 1.5\%$ . If the interval contains 0, it is uncertain whether there was an increase or decrease. For monthly level, the coefficient of variation (CV) is given. The resulting confidence interval is the estimated value  $\pm 1.65 \times 0.9\%$  or  $\pm 1.5\%$  or  $\pm$ 

Nonsampling errors can occur because of nonresponse,

insufficient coverage of the universe of wholesale businesses, mistakes in the recording and coding of data, and response errors. Imputed data accounts for approximately 28% of the sales estimates and 31% of the inventories estimates. Additionally, estimates of sales and inventories prior to March 2001 have been restated from SIC-based estimates. The restatement methodology may have introduced additional nonsampling error. The calculated median standard errors of year-to-year change estimates may also be influenced by the methodology used to impute historical data for units in the NAICS sample. The effect of this historic imputation methodology on published estimates will decrease as more data from the NAICS sample is accumulated. Precautionary steps are taken to minimize nonsampling errors, but their magnitude is not directly measured.

Further information regarding the reliability of estimates can be found on the Internet on our web page at http://www.census.gov/svsd/www/wreliab.html.

## r Revised

1 Adjusted sales and inventories data shown in Table 1 are obtained by dividing the unadjusted data by the adjustment factors shown above for the corresponding group. Adjusted data for the totals are obtained by adding the durable and nondurable goods. Seasonal factors shown for the totals will provide an approximation of the adjusted estimates, but may show small differences from the published data.

Note: The seasonal factors shown have been computed based on monthly estimates through the current month preliminary estimates.
